RESEARCH ACTIVITIES

I direct the Cognitive Systems Laboratory ([CSL](#)), which participates in the Center for [SPIRAL](#) and [PEN](#) Cluster. I am also the Associate Director of the [Institute for Experiential Robotics](#), a member of the [Institute for Chemical Imaging of Living Systems](#), and a co-founder of the TRANSLATE Center (in progress) at Northeastern. CSL focuses on signal, image, data analytics, and statistical machine learning in the context of human-cyber-physical systems. Topics of interest include active distributed sensing and learning under resource constraints for modeling and inference, Bayesian multimodal sensor/evidence fusion, recursive Bayesian state estimation, human-intent inference, semi-autonomy, and autonomy. Application areas of recent interest include cyber-human systems, human-system collaboration, brain interfaces, brain stimulation, biomedical image and data analysis, sensor fusion for autonomous systems. My research activities have been continuously supported since 2005 by NSF, NIH, DARPA, IARPA, other DoD sources, foundations, and industry. A comprehensive list of publications is provided at the end of the CV due to length.

TEACHING ACTIVITIES

I favor project-based learning. Mathematical abstraction ability and rigor are primary considerations for me. I immerse students of all levels into existing research projects, where they need to work as part of a team. I emphasize the importance of scientific methodology and explicit declaration of modeling assumptions, clarity of thought, precision of language, and necessity of breadth. I encourage undergraduate students to join research activities with graduate students and postdoctoral research associates. This allows PhD students and postdocs to develop mentoring skills, while letting undergraduate students unleash their creativity and talent on research problems. I involve high school students and teachers in research. I pay special attention to diversity and place emphasis on the composition of my group from this perspective.
