GitHub Education

Git and GitHub
Teacher Training at
Northeastern University

GitHub is where people build software. The platform hosts code, enables collaboration, and as a teacher, gives you deeper insight into student work. Git is a version control system, which tracks versions of your project over time.

As a researcher you can document your process, work with others around data, and help your students build portfolios of work.

This session is suitable for teachers thinking about using version control, or teachers who use GitHub and want a deeper understanding of features and benefits.

As an attendee, you'll learn:
* Basics: what makes Git work under the hood
* Individual assignments: using Git and GitHub for solo work
* Student programs: opportunities for students

FEATURING

Vanessa Gennarelli
GitHub Education

TIME

Tuesday, April 10th 2018
2-4pm

LOCATION

440 Curry Center
Northeastern University
Boston, MA
