

Jay Walter sent images of existing properties in Newton that the building professionals agree incorporate double width garage doors that “work”. This will be one point of discussion November 5 as we work to define the scope of amendments to section 3.4.4. As you remember, the professional’s recommendation is to allow double doors up to a width of 16’. They further noted that this would allow access to narrower garages and can be done so as not to overpower the main building.
